DETAILED ACTION

1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 11, drawn to a method of treating a hypoproliferative cell disorder or disorder involving increased cell death in a patient comprising administering to an EphA2 antagonistic agent, wherein the antagonistic agent is an EphA2 polypeptide fragment, classified in Class 424, subclass 184.1.
- II. Claims 12-16, drawn to a method of treating a hypoproliferative cell disorder or disorder involving increased cell death in a patient comprising administering to an EPHA2 antagonistic agent, wherein the antagonistic agent is an antibody, classified in Class 424, subclass 143.1.
- III. Claims 17, drawn to a method of treating a hypoproliferative cell disorder or disorder involving increased cell death in a patient comprising administering to an EphA2 antagonistic agent, wherein the antagonistic agent is a small molecule antagonist, classified in Class 424, subclass 143.1.
- IV. Claims 17, drawn to a method of treating a hypoproliferative cell disorder or disorder involving increased cell death in a patient comprising administering to an EphA2 antagonistic agent, wherein the antagonistic agent is enzymatic activity antagonist, classified in Class 424, subclass 184.1.
- V. Claims 17, drawn to a method of treating a hypoproliferative cell disorder or disorder involving increased cell death in a patient comprising administering to an EphA2 antagonistic agent, wherein the antagonistic agent is EphrinA1 siRNA or eiRNA molecule, classified in Class 514, subclass 44.
- VI. Claims 17, drawn to a method of treating a hypoproliferative cell disorder or disorder involving increased cell death in a patient comprising administering to an EphA2 antagonistic agent, wherein the antagonistic agent is EphrinA1 antisense molecule, classified in Class 514, subclass 44.

Claims 1-10 and 18-23 link inventions I-VI. The restriction requirement among the linked inventions is subject to the nonallowance of the linking claims, claims 1-10 and 18-23. Upon the allowance of the linking claims, the restriction requirement as to the linked inventions shall be withdrawn and any claims depending from or otherwise including all the limitations of the allowable linking claim will be entitled to examination in the instant application. Applicants are advised that if any such claims depending from or including all the limitations of the allowable linking claims are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is

Application/Control Number: 10/823,259 Page 3

Art Unit: 1644

withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

- 2. Groups I-VI are different methods. Various method of treating differ with respect to ingredients, method steps, and endpoints; therefore, each method is patentably distinct.
- 3. These inventions are distinct for the reasons given above. In addition, they have acquired a separate status in the art as shown by different classification and/or recognized divergent subject matter. Further, even though in some cases the classification is shared, a different field of search would be required based upon the structurally distinct products recited and the various methods of use comprising distinct method steps. Therefore restriction for examination purposes as indicated is proper. Further, a prior art search also requires a literature search. It is an undue burden for the examiner to search more than one invention.

Species Election

4. Irrespective of whichever group applicant may elect, applicant is further required under 35 US 121 (1) to elect a single disclosed species to which claims would be restricted if no generic claim is finally held to be allowable and (2) to list all claims readable thereon including those subsequently added.

If any one Groups I-VI is elected, applicant is required to elect a single specific one or more additional hypoproliferative cell disorder therapies such as those recited in claim 22 and 23. These are distinct species because their structures and modes of action are different which, in turn, address different therapeutic endpoints.

Applicant is required under 35 U.S.C. § 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

5. Applicant is advised that a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 C.F.R. § 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. M.P.E.P. § 809.02(a).

Art Unit: 1644

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103 of the other invention.

- 6. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Maher Haddad whose telephone number is (571) 272-0845. The examiner can normally be reached Monday through Friday from 7:30 am to 4:00 pm. A message may be left on the examiner's voice mail service. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christina Chan can be reached on (571) 272-0841. The fax number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
